Trading Desk: how every agent works (paper trading only, NSE F&O stock options)

Updated 4 Nov 2026. Nothing here places real orders; INDmoney access is read-only. Rules from the user: buy options only (CALL for up, PUT for down), no stop-loss, square-off 15:20 except the overnight carry rule. Four teams trade side by side with their own paper money.

1. The whole system

NSE filings
checked every 10 s: results, orders, regulatory (agents/announcements.py)

Results reader
20 parallel workers, OCR for scanned PDFs, AI helper (Gemini) for figures the parser misses

News feeds
ET, Mint, BS, CNBC-TV18, Google News every 30 s (newsfeed.py); Concalls (concalls.py)

NSE pre-open + volume spurts
pre-open at 09:08; spurts every minute (preopen.py, spurt.py)

Policy, Macro, Commodities, Market context
RBI/SEBI/GST/tariffs to stocks hit or helped; Nifty move and why

F&O Activity
live open-interest build-ups (activity.py)

↓

Intelligence log
journal/intel/<date>.jsonl (intel.py)

Data Analyzer
forecast per stock + market mood (analyzer.py)

Expectations + Valuation + Results Reaction
already priced in? P/E, P/B; expected gap from 3 yrs of results

Shock agent
big news + Nifty 1.5%+ with breadth/VIX = stand aside or flip (shock.py)

Day mode
normal / careful / no_trade (daymode.py, journal/day_mode.json)

↓ four teams, each with its own paper money and 4 slots ↓

2. The four teams: how each one decides

PREOPEN team (Rs 1 lakh)

A. **Gap recovery** (new 4 Nov): stock opens 1.5%+ from yesterday's close

▼

Wait to 09:30: price back 1%+ from the early extreme AND past the open

▼

NEWS team (Rs 1 lakh)

Idea: analyzer forecast, results filing, or quiet spurt the news agrees with

▼

Skip: stock's own results day (for forecasts), already priced in (Expectations)

▼

Skip: results day, or strong news behind the gap

Buy the recovery direction (CALL after gap-down, PUT after gap-up)

B. **Pre-open order flow** and **results-day gaps** (gapfollow.py): follow the gap from 09:30 if the first 15 min agree

Backtest: recovery +Rs 33.6k on 35 trades; continuation loses.

Price confirms the direction

Trend Checker scores the chart 60+ (momentum.py)

Buy CALL (up) or PUT (down)

Live record is negative so far; being reviewed.

SPURT team (Rs 1 lakh) - revived pure engine

1. Zero-news quarantine: out if results today/next 2 days or ANY news/filing on the stock (it goes to the news team if the news agrees)

2. Pre-open calm: gap between -1% and +1%

3. Multi-week structure: veto exhaustion runs (>8% in 5d / >12% in 10d at the 20-day high)

4. NSE volume 1.8x+ usual at a 0.2-0.5% move, candle and VWAP agree; window 09:30-11:30

5. F&O OI not against it (long build-up / short covering for CALL; short build-up / long unwinding for PUT)

Buy ITM1 option: bid-ask gap ≤1%, delta 0.50-0.65; target 15% if Risk allows, else 10%

Backtest of the testable gates: 83 trades, +Rs 97k (old rule +Rs 156k). News and OI gates cannot be backtested.

MOVERS team (Rs 30,000)

Top gainers/losers of the day (INDmoney movers)

Chart reader: reversal setup, support/resistance, regime (chart_reader.py, regime.py)

News Guard: skip results, regulatory action, policy hit, strong news against (news_guard.py)

Shock days: no fading gainers in a rally, no bounces in a crash

Buy PUT on a fading gainer / CALL on a bouncing loser; 1% target

↓ every trade, all teams ↓

Options agent
picks the contract: nearest expiry, 1 strike in the money, bid-ask gap and delta limits (options.py, indmoney.pick_option)

Risk agent
size from free money, target premium net of all charges, hit chance (risk.py, costs.py)

Decision agent
final TRADE / SKIP, one lot minimum, never two on a stock (decision.py)

Paper trade + SIGNAL
row in journal/paper_trades.csv (journal.py, paper_trade.py)

↓

Exit checker (every 15 s)
sells at the target bid

15:20 decision (carry.py)
stays one night UNLESS: results today/next session, own filing today, or expiry within 3 days. Otherwise squared off

Next morning

Trade News Monitor

sold at the open on overnight bad news; else target or next 15:20

news after entry: would sell / raise target (observe only)

↓

15:40 review (review.py)
scoreboard per team, breakdowns, AI helper scoring, journal commit

Observe-only agents
Probability Analyzer, Candlestick patterns, Crowd psychology, AI TRADE/SKIP view: log, never block

User decides
the best team after 30+ trades each

3. A trading day

Time (IST)	What happens
08:40	Morning brief: overnight filings, expected Nifty open (US stocks, crude), day mode, mover forecast; watcher started
09:08 / 09:10	Pre-open snapshot saved; mover forecast message
09:15 - 15:15	Entries. Preopen gap recovery decided at 09:30. NSE filings every 10 s; spurts every minute
12:40	Midday trades report; journal pushed
13:40, 14:40	Watcher health check (restart if the container killed it)
15:20	Square-off or carry overnight
15:40	Evening review and report

4. Files

File	Purpose
watcher.py	All-day watcher: scans, entries for every team, exits, status lines
agents/	Every agent (information, analysis, trading, research)
config.yaml	Teams, capital, targets, thresholds
review.py	Evening review and team scoreboard
backtest_*.py	Tests of each idea on 60 days of 5-minute data
tests/	209 automated tests (python -m pytest -q)
journal/	paper_trades.csv, strategy_changes.md, backtest_summary.md, reviews
GUIDE.md, CLAUDE.md, .claude/skills/	Documentation and the instructions Claude follows (desk-handover, trading-desk)

Secrets (INDmoney login, Gemini key) live outside the project folder and are not in the archive.
